JavaScript, React, Express, AWS, S3, DynamoDB

- Full-stack React application designed to production within a week by a 7-person team with continued integration being carried out.
- Web application presenting a login system, upcoming events that include in-person and online, attendance management, and information about the application.
- Provides accessibility-friendly events to those that need them.
- Full-stack discussion board designed and created within a week.
- Includes an authenticated login system, persisting sessions, and a discussion board where information about different hobbies and discussions are formed and presented.
- Led a 6-person team as repository master throughout the application, experiencing the nuance of leading a development team.
- Full-stack thought board implemented within a week. Users can add thoughts and upload images to a main chat board.
- Created with React on the frontend and Amazon Web Services on the backend, featuring DynamoDB for cloud database storage and S3 for image processing.
